Tasko: what really drives growth?

Growth Modeling & Data-Driven Strategy — Final project

Group [number] — [Names]

IMT 2026

Growth is product-led *after* the sign-up

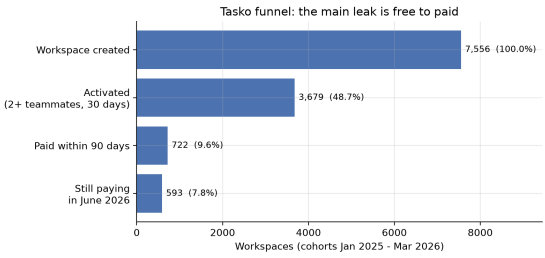

×2.5
conversion once a team of three is formed

1 in 5
new workspaces now come from the guest loop

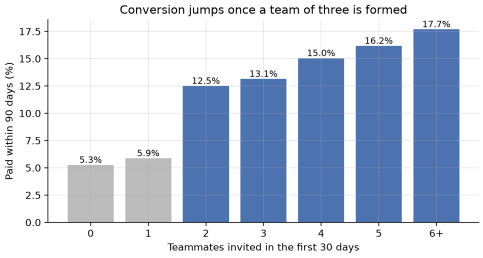

1.2
LTV : CAC of paid search (on revenue)

The leak is free to paid, and activation controls it

Funnel, cohorts Jan 2025 – Mar 2026

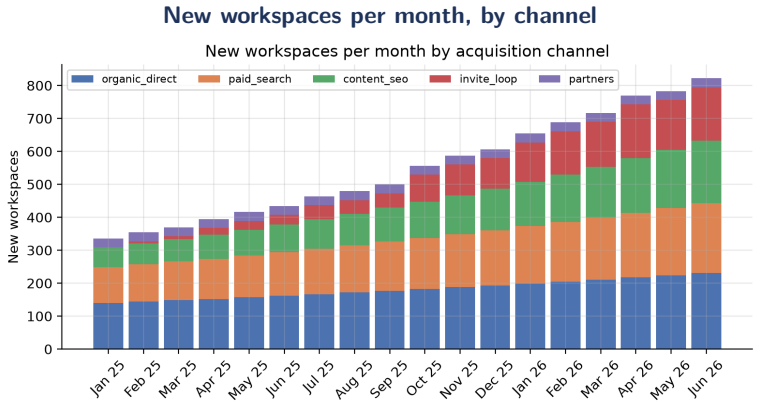

Aha moment: a team of three

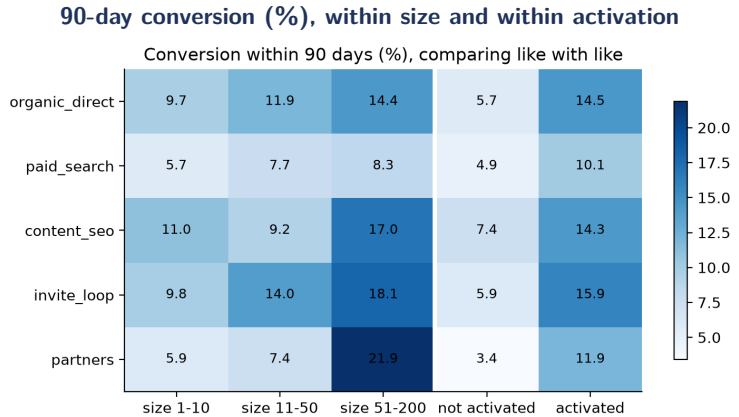

Activated workspaces: 13.8 % conversion vs 5.6 % — 70 % of all payers

A loop that multiplies, but does not replace, acquisition

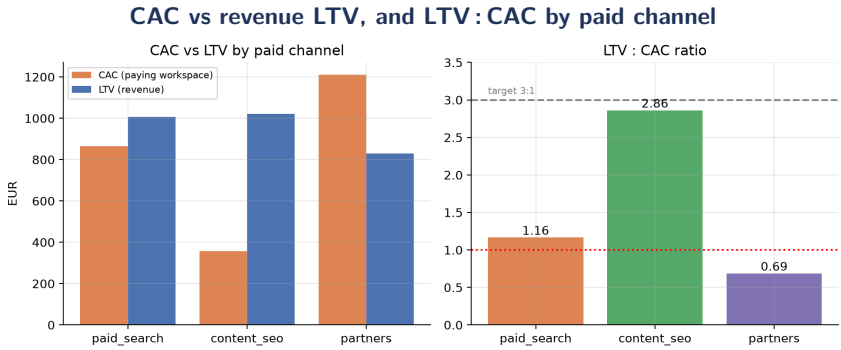

Effective K at 180 days: 0.09 → 0.12 · $K \ll 1$ · median delay 146 days

Paid search converts least, even like for like

Same size mix across channels · gap persists among activated workspaces

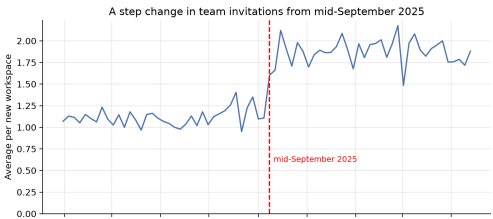

Only content SEO approaches the 3 : 1 benchmark

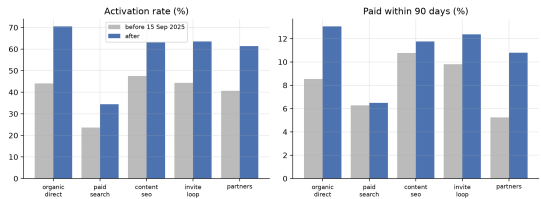

Payback: SEO 9.5 months · paid search 31.5 · partners 31.7

September 2025: the onboarding step change

Teammates invited in the first week

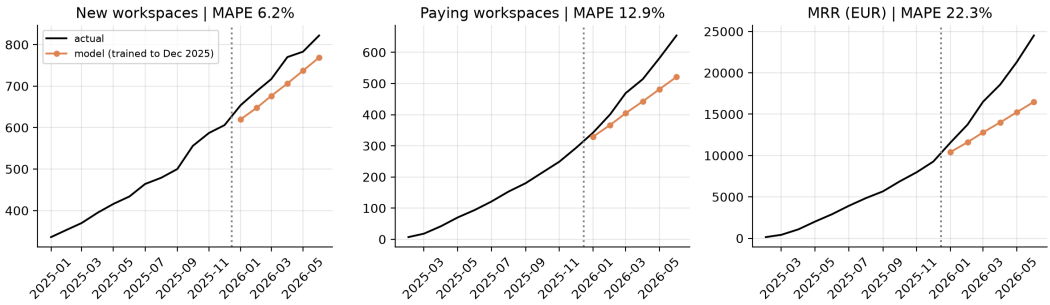

Before vs after 15 September 2025

Activation 38 % → 58 % · conversion 8.1 % → 10.8 % · churn unchanged · paid search flat

Backtest: the model is fragile where the business changed

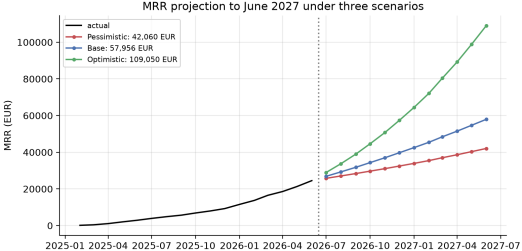

Calibrated to December 2025, tested on January – June 2026

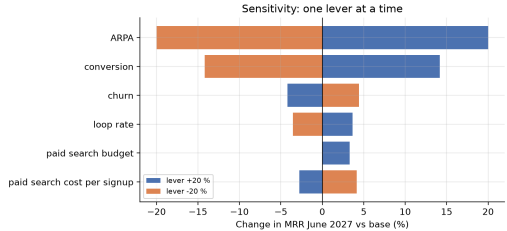

With post-change conversion and 2026 ARPA: MAPE MRR 22.3 % → 6.2 %

The outcome is decided after the sign-up

MRR to June 2027: 42 / 58 / 109 k €

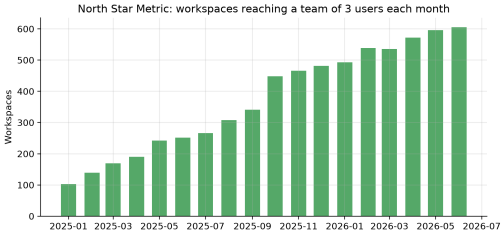

One lever at a time, ±20 %

+20 % conversion: +14 % MRR · +20 % paid search budget: +3.3 %

North Star, test and recommendations

NSM: workspaces reaching a team of three

A/B test

- Optional “invite two teammates” step for paid search sign-ups
- Activation 34.5 % $\rightarrow$ 42.5 %: 577 per arm, $\approx$ 6 months

Recommendations

- Steer on the team of three
- Cap paid search, grow SEO
- Stop or renegotiate partners
