Tasko

Product-led B2B SaaS

THE BOARD'S QUESTION

What really drives Tasko's growth, before the Series A?

DATA PERIOD	DATA FILES	ROWS IN TOTAL	GROUPS
Jan 2025 → Jun 2026	**4 CSV files**	**62,311**	**3, 9, 15, 21**

The company

Business model. Team task-management tool. Free plan for everyone; paid plans billed per seat: **Pro €8 / seat / month**, **Business €12 / seat / month**. Users can invite colleagues and external guests.

Situation. Tasko has almost no sales team: growth is supposed to come from the product itself (PLG). The founders believe in it but cannot prove it. Paid search is the largest marketing line. The board wants to know *what really drives growth* before the Series A.

Data period

January 2025 → June 2026 (18 months). The data was extracted on **30 June 2026**: anything after that date is not observed yet, so an empty end date means *still active at extraction*.

All amounts are in euros. All companies and data are fictional.

Data files

`workspaces.csv` 9,932 rows

Column	Description
`workspace_id`	unique workspace (= one customer account)
`created_date`	creation
`acquisition_channel`	organic_direct / content_seo / paid_search / partners / invite_loop (creator first joined Tasko as a guest of another workspace)
`origin_workspace_id`	for invite_loop: the workspace where the creator was a guest
`company_size`	declared company size
`upgrade_date`	first paid day (empty = free)
`plan`	pro / business

`users.csv` 47,901 rows

Column	Description
`user_id`	unique user
`workspace_id`	workspace joined

Column	Description
`joined_date`	date joined
`invited_by_user_id`	who invited them (empty for the owner)
`role`	owner / member

`monthly_revenue.csv` 4,424 rows

Column	Description
`workspace_id`	paying workspace
`month`	billing month
`seats`	billed seats
`mrr_eur`	monthly recurring revenue

`marketing_spend.csv` 54 rows

Column	Description
`month`	first day of month
`channel`	channel
`spend_eur`	spend

Data quality

> **THIS IS A RAW EXTRACT**
> The files come straight from production systems and **have not been cleaned**. Expect what real data contains: duplicates, internal or test accounts, inconsistent labels, mixed date formats, impossible values, missing values and gaps.
>
> Write down every cleaning rule you apply and how many rows it affects: **your cleaning log is graded.**

Guiding questions

The same five questions apply to every company. They are starting points, not a checklist: the best projects find what is not asked here.

1. Map the funnel and, if there is one, the growth loop. Where does value leak?
2. Which channels, segments, cities or periods behave differently? Does the difference survive once you compare like with like?
3. What are the unit economics: CAC, retention, LTV, payback, by cohort and by channel?
4. What changed during these 18 months, and what did each change cause?
5. Which North Star Metric would you give this company, and why?

What you hand in

A **growth model** with a backtest and 3 scenarios, a **4-page report** with an A/B test plan and your cleaning log, and **10 slides** for an 8-minute defense followed by a cold question. All details and the grading grid are in the project brief.
